

ASSIGNMENT-2

Q1:- Create a table listing 3 types of printers, 2 types of scanners, and 2 types of webcams, and for each, write one real-life use case (for example: 'Inkjet printer – printing college assignments').

ANS:-

Category	Type	Real-life use case
Printer	Inkjet Printer	Printing college assignments and color photos
Printer	Laser Printer	Printing office documents and reports
Printer	3D Printer	Creating prototypes and small 3D models
Scanner	Flatbed Scanner	Scanning documents, certificates, and photos
Scanner	Sheet-fed Scanner	Scanning multiple pages of office documents quickly
Webcam	Built-in Webcam	Attending online classes or video calls
Webcam	USB External Webcam	Video conferencing and online interviews

Q2. Draw a labeled diagram showing how a typical home printer connects to a laptop or PC, including the connection interface used (USB, Wi-Fi, or Bluetooth).

ANS:-

Q3. List three different connection interfaces (such as USB, Wi-Fi, Bluetooth) used by peripherals like printers, scanners, and webcams, and for each, name one advantage and one disadvantage.

Hint: Think about speed, convenience, and compatibility.

ANS:-

1. **USB:** USB provides a fast and reliable connection. It is easy to set up and works with most computers. However, it requires a physical cable and limits device movement.
 - **Advantage:** Fast and reliable connection.
 - **Disadvantage:** Requires a physical cable.

2. **Wi-Fi:** Wi-Fi provides a convenient wireless connection and allows multiple devices to connect. It is useful for printers and scanners. However, it requires a Wi-Fi network and can be affected by weak signals.
 - **Advantage:** Wireless connection that allows multiple devices to connect.
 - **Disadvantage:** Requires a Wi-Fi network and may be affected by weak signals.

3. **Bluetooth:** Bluetooth provides an easy short-range wireless connection and does not require cables. It is convenient for webcams and other small peripherals. However, it has limited range and is generally slower than USB.
 - **Advantage:** Provides a convenient wireless connection without cables.
 - **Disadvantage:** Has a limited range and is generally slower than USB.

Q4. Pick any one device you use at home or college (printer, scanner, or webcam). Write step-by-step instructions for how you would connect it to your computer, including what cable or wireless method you would use and any setup steps required.

ANS: - Device Selected: Printer

A printer is a useful peripheral device used at home, college, or office to print documents, assignments, photographs, and other files. I would connect my printer to the computer using a **USB cable**, because it provides a simple and reliable connection.

□ Step-by-Step Instructions

Step 1: Check the printer and computer first, make sure the printer and computer are working properly. Check that the printer has enough paper and ink or toner.

Step 2: Place the printer properly

Keep the printer on a flat and stable surface near the computer. Make sure there is enough space around it for ventilation and easy access.

Step 3: Connect the power cable

Connect the printer's power cable to a suitable electrical socket. Turn on the printer using the power button.

Step 4: Connect the USB cable

Take a compatible **USB printer cable**. Connect one end to the USB port on the printer and the other end to an available USB port on the computer.

Step 5: Allow the computer to detect the printer after connecting the USB cable, Windows may automatically detect the printer and install the required basic driver.

Step 6: Install the printer driver

If Windows does not automatically install the driver, download and install the correct printer driver from the printer manufacturer's official website. Select the correct printer model and follow the installation instructions.

Step 7: Open printer settings

On Windows, open **Settings** → **Bluetooth & devices** → **Printers & scanners**. Check whether the connected printer appears in the list.

Step 8: Set the printer as default if I use this printer regularly, I can select it as the **default printer** so that print jobs are automatically sent to it.

Step 9: Check printer preferences before printing, check settings such as paper size, page orientation, print quality, colour or black-and-white printing, and the number of copies.

Step 10: Print a test page

I would print a test page to confirm that the printer is connected correctly and working properly.

Step 11: Print a document

Open a document, photo, or assignment and press **Ctrl + P**. Select the connected printer and click **Print**.

□ Cable/Connection Method

I would use a **USB connection** between the printer and computer. USB is easy to set up, provides a stable connection, and does not require Wi-Fi.

➤ Setup Requirements

- Printer
- Computer or laptop
- Printer power cable
- Compatible USB printer cable
- Paper
- Ink or toner
- Correct printer driver/software

➤ Common Problems and Solutions

- **Printer not detected:** Check the USB cable and try another USB port.
- **Printer showing offline:** Restart the printer and computer and check the connection.
- **Driver problem:** Install the latest compatible printer driver.
- **Poor print quality:** Check ink/toner levels and clean the print head if required.
- **Paper not printing:** Check for paper jams and make sure paper is loaded correctly.

➤ Safety Precautions

- Do not touch electrical connections with wet hands.
- Use the correct power cable for the printer.
- Do not force the USB connector into the port.
- Keep the printer away from water and excessive heat.
- Switch off the printer before moving or cleaning it.
